The Climate Corporation
201 Third Street, Suite. 1100
San Francisco, CA 94103

Dear Climate Corporation:

I am writing to apply to your Scientific Software Engineer Position. This May I am going to be finishing what has been an enlightening experience at the University of California, Berkeley where I first heard about your company from a representative at a career fair.

I have an interest in this position for a couple of different reasons. First, I am an Applied Mathematics major with a Computer Science concentration. I have a strong background in Matlab, Python, and a few other languages. I have taken multiple classes which have required me to use both. Second, I have a background in statistical computing with data where I used R to work with large data sets to analyze information along with experience translating algorithms and models into code. Moreover, I communicate with my peers effectively and have served as a leader in community service organizations. Finally, one of the biggest reasons I am interested in working with The Climate Corporation is my love for difficult problems. In my time at Berkeley, I learned that I love to challenge myself. I switched into a more difficult major, did not hesitate to take demanding classes, and did all I could to demand more of myself. I want to continue to find opportunities to challenge myself after I graduate, and I know that working at The Climate Corporation will provide that for me.

Please feel free to ask me any questions - my contact information can be found here and on my resume. Also, I am located just across the Bay, so I am just a stone's throw away. Thank you for your consideration and time.

Sincerely yours,

Patrick Yu
